Definitions for Displays Product Listing Column Headers

Column Header	Definition
ENERGY STAR Partner	An organization that signed a Partnership Agreement with EPA to manufacture or private label ENERGY STAR qualified products.
Brand	An identifier assigned by the manufacturer or private labeler to a product or family/series of products for sales and marketing purposes.
Model Name	An identifier assigned by the manufacturer or private labeler to a product or family/series of products for sales and marketing purposes.
Model Number	A distinguishing identifier, usually alphanumeric, assigned to a product by the manufacturer or private labeler.
Additional Model Information	This column includes for the qualified model or family, family members, additional model names, model numbers and other identifying information associated with a product or family/series of products for sales and marketing purposes. Other identifying information includes, but is not limited to, SKUs, UPC codes, retail numbers, and/or descriptions of models included/not included in the reported Model Family.
Display Type	<p>The 4 types of Displays eligible for ENERGY STAR certification are:</p> <ol style="list-style-type: none"> 1) Digital Picture Frame: An electronic device, typically with a diagonal screen size less than 12 inches, whose primary function is to display digital images. It may also feature a programmable timer, occupancy sensor, audio, video, or bluetooth or wireless connectivity. 2) Professional Display/Signage: An electronic device typically with a diagonal screen size greater than 12 inches and a pixel density less than or equal to 5,000 pixels/in². It is typically marketed as commercial signage for use in areas where it is intended to be viewed by multiple people in non-desk based environments, such as retail or department stores, restaurants, museums, hotels, outdoor venues, airports, conference rooms or classrooms. 3) Monitor: An electronic device, typically with a diagonal screen size greater than 12 inches and a pixel density greater than 5,000 pixels per square inch (pixels/in²), that displays a computer's user interface and open programs, allowing the user to interact with the computer, typically using a keyboard and mouse. 4) Enhanced-Performance Display: A computer monitor that has all of the following 14 features and functionalities: (a) A contrast ratio of at least 60:1 measured at a horizontal viewing angle of at least 85°, with or without a screen cover glass; (b) A native resolution greater than or equal to 2.3 megapixels (MP); and, (c) A color gamut of at least sRGB as defined by IEC 61966 2-1.

Column Header	Definition
Panel Technology	The most common screen types include TN LCD, IPS LCD, VA LCD, OLED, Plasma, CRT, and others.
Backlight Technology	The lighting technology used to illuminate the panel. The most common types of backlight technology are LEDs and CCFLs.
Native Resolution	The fixed physical pixel count of the display.
Maximum Resolution	The maximum resolution that the device is capable of displaying.
Screen Size	The diagonal screen size in inches.
Screen Area	The areal density of the luminous flux incident at a point on a surface. Illuminance refers to the ambient light conditions in the environment in which the display is located.
Data/Network/Peripheral Ports	The peripheral port used for the display.
Data/Network Connection	The network connection used for the display.
On Mode Power in Watts	The power mode in which the product has been activated, and is providing one or more of its principal functions. The common terms "active," "in-use," and "normal operation" also describe this mode. The power in this mode is typically greater than the power in Sleep Mode and Off Mode.
Sleep Mode Power in Watts	The power mode the product enters after receiving a signal from a connected device or an internal stimulus. The product may also enter this mode by virtue of a signal produced by user input. The product must wake on receiving a signal from a connected device, a network, a remote control, and/or an internal stimulus. While the product is in this mode, it is not producing a visible picture, with the possible exception of user-oriented or protective functions such as product information or status displays, or sensor-based functions.
Off Mode Power in Watts	The power mode in which the product is connected to a power source, and is not providing any On Mode or Sleep Mode functions. This mode may persist for an indefinite time. The product may only exit this mode by direct user actuation of a power switch or control. Some products may not have this mode.
Automatic Brightness Control (ABC)	The self-acting mechanism that controls the brightness of a display as a function of ambient light.
On Mode Power at 10 Lux	For ABC-enabled displays, this is the on-mode power consumed by the display in a room with low ambient light.
On Mode Power at 300 Lux	For ABC-enabled displays, this is the on-mode power consumed by the display in a room with bright ambient light.
Maximum Luminance	The photometric measure of the luminous intensity per unit area of light travelling in a given direction, expressed in candelas per square meter (cd/m ²). Luminance refers to the brightness settings of a display.

Column Header	Definition
Enhanced Performance Display	<p>A computer monitor that has all of the following features and functionalities:</p> <ul style="list-style-type: none"> (a) A contrast ratio of at least 60:1 measured at a horizontal viewing angle of at least 85°, with or without a screen cover glass; (b) A native resolution greater than or equal to 2.3 megapixels (MP); and, (c) A color gamut size of at least sRGB as defined by IEC 61966 2-1. Shifts in color space are allowable as long as 99% or more of defined sRGB colors are supported.
Date Available on Market	The date that the model is available for purchase.
Date Qualified	The date on which the product was confirmed to meet the ENERGY STAR specification.
Markets	This list/dataset includes products sold in the U.S. and/or Canada and other ENERGY STAR partner countries.
ENERGY STAR Model Identifier	A unique string of characters used to identify models with the same performance characteristics. This sequence is generated by certification bodies and is reported as a single row of data on the lists of certified products.

Key Efficiency Criteria

Qualified models meet all ENERGY STAR requirements as listed in the Version 5.1 ENERGY STAR Program Requirements for Displays that are effective as of October 30, 2009, or the Version 6.0 ENERGY STAR Program Requirements for Displays that are effective as of June 1, 2013.

Version 5.1 Requirements

On Mode Max Power Consumption Requirements (Non-ABC-Enabled):		
Calculation of Maximum On Mode Power Requirements (PON_MAX)		
Product Type		PON_MAX (watts)
		Where: r = Screen resolution in megapixels A = Viewable screen area, rounded to the nearest 0.1 square inches.
Diagonal Screen Size, d (inches)	Screen Resolution, r (megapixels)	
d < 30.0	r ≤ 1.1	$(6.0 \times r) + (0.05 \times A) + 3.0$
	r > 1.1	$(9.0 \times r) + (0.05 \times A) + 3.0$
30.0 ≤ d ≤ 60.0	Any	$(0.27 \times A) + 8.0$

Sleep Mode Requirements
Measured Sleep Mode power (PSLEEP) shall be less than or equal to the Maximum Sleep Mode Power Requirement (PSLEEP_MAX) of 2 Watts.

Off Mode Requirements
Measured Off Mode power (POFF) shall be less than or equal to the Maximum Off Mode Power Requirement (POFF_MAX) of 1 Watt.

Number of Units Required for Testing
Representative Models shall be selected for testing per the following requirements:
For qualification of an individual product model, a product configuration equivalent to that which is intended to be marketed and labeled as ENERGY STAR is considered the Representative Model;
For qualification of a product family, any product configuration within the family may be considered the Representative Model;
If the steady-state power consumption of the UUT is greater than 85% of the ENERGY STAR qualification limit in any of the three operating modes, two additional units of the same model shall be tested.

External Power Supply
If the product is shipped with an EPS, the EPS shall meet the level V performance requirements under the International Efficiency Marking Protocol and include the level V marking.

ABC-Enabled On Mode Power Consumption Requirements: Calculation of On Mode Power for Products with ABC Enabled by Default
Equation 1: $PON = (0.8 \times PH) + (0.2 \times PL)$
Notes: PON is the calculated On Mode power PH is the measured On Mode power in high ambient lighting conditions (300 lux), PL is the measured On Mode power in low ambient lighting conditions (0 lux).

Version 6.0 Requirements

On Mode Max Power Consumption Requirements (Non-ABC-Enabled):
Calculation of Maximum On Mode Power Requirements (PON_MAX)
On Mode power (PON), as measured per the ENERGY STAR test method (referenced in Table 6), shall be less than or equal to the Maximum On Mode Power Requirement (PON_MAX), as calculated and rounded per Equation 1, below. If the product's pixel density (DP), as calculated per Equation 1, is greater than 20,000 pixels/in ² , then the screen resolution used to calculate PON_MAX shall be determined per Equation 2.
Equation 1: Calculation of Pixel Density $D_P = (r \times (10)^6) / A$
Notes: DP is the pixel density of the product rounded to the nearest integer, in pixels/in ² , r is the screen resolution, in megapixels, and A is the viewable screen area, in in ² .
Equation 2: Calculation of Resolution if $D_P > 20,000$ pixels/in ² $r_{1} = (20,000 \times A) / (10)^6$ $r_{2} = (D_P - 20,000) \times A / (10)^6$
Where: - r1 and r2 are the screen resolutions, in megapixels, to be used when calculating PON_MAX, - DP is the pixel density of the product rounded to the nearest integer, in pixels/in ² , and - A is the viewable screen area, in in ² .

Table 1: Calculation of Maximum On Mode Power Requirements (PON_MAX)		
Product Type and Diagonal Screen Size, d (inches)	PON_MAX where $D_P \leq 20,000$ pixels/in ² (in watts)	PON_MAX where $D_P > 20,000$ pixels/in ² (in watts)
	Where: * r = Screen resolution in megapixels * A = Viewable screen area in in ² * The result shall be rounded to the nearest tenth of a watt	Where: * r = Screen resolution in megapixels * A = Viewable screen area in in ² * The result shall be rounded to the nearest tenth of a watt
d < 12.0	$(6.0 \times r) + (0.05 \times A) + 3.0$	$((6.0 \times r_1) + (3.0 \times r_2) + (0.05 \times A) + 3.0)$
12.0 ≤ d < 17.0	$(6.0 \times r) + (0.01 \times A) + 5.5$	$((6.0 \times r_1) + (3.0 \times r_2) + (0.01 \times A) + 5.5)$
17.0 ≤ d < 23.0	$(6.0 \times r) + (0.025 \times A) + 3.7$	$((6.0 \times r_1) + (3.0 \times r_2) + (0.025 \times A) + 3.7)$
23.0 ≤ d < 25.0	$(6.0 \times r) + (0.06 \times A) - 4.0$	$((6.0 \times r_1) + (3.0 \times r_2) + (0.06 \times A) - 4.0)$
25.0 ≤ d ≤ 61.0	$(6.0 \times r) + (0.1 \times A) - 14.5$	$((6.0 \times r_1) + (3.0 \times r_2) + (0.1 \times A) - 14.5)$
30.0 ≤ d ≤ 61.0 (for products meeting the definition of a Signage Display only)	$(0.27 \times A) + 8.0$	$(0.27 \times A) + 8.0$

Calculation of On Mode Power Allowance for Enhanced-Performance Displays
Equation 3: $P_{(EP < 27)} = 0.30 \times P_{(ON_MAX)}$ $P_{(EP \geq 27)} = 0.75 \times P_{(ON_MAX)}$
Where: - PEP < 27" is the On Mode power allowance, in watts, for an Enhanced-Performance Display with a diagonal screen size less than 27 inches, - PEP ≥ 27" is the On Mode power allowance, in watts, for an Enhanced-Performance Display with a diagonal screen size greater than or equal to 27 inches, and - PON_MAX is the maximum On Mode power requirement, in watts.

ABC-Enabled Max On Mode Power Consumption Requirements:
3.3.3 For products with Automatic Brightness Control (ABC) enabled by default, a power allowance (PABC), as calculated per Equation 5, shall be added to PON_MAX, as calculated per Table 1, if the On Mode power reduction (RABC), as calculated per Equation 4, is greater than or equal to 20%.
- If RABC is less than 20%, PABC shall not be added to PON_MAX. - PON, as measured with ABC disabled per the ENERGY STAR test method, referenced in Table 6 below, shall be less than or equal to PON_MAX.

Calculation of On Mode Power Reduction & Power Allowance for Products with ABC Enabled by Default:
--

Calculation of On Mode Power Reduction & Power Allowance for Products with ABC Enabled by Default:

Equation 4: Calculation of On Mode Power Reduction for Products with ABC Enabled by Default

$$R_ABC = 100 \times ((P_300 - P_10) / P_300)$$

Where:

Sleep Mode Requirements

Measured Sleep Mode power (PSLEEP) for products with no bridging or network capabilities shall be less than or equal to the Maximum Sleep Mode Power Requirement (PSLEEP_MAX) of 0.5 Watts.

Measured Sleep Mode power (PSLEEP) for products with one or more of the bridging, network, or additional capabilities in Table 2 or 3 shall be less than or equal to the Maximum Bridging/Network Sleep Mode Power Requirement (PSLEEP_AP), as calculated per Equation 7.

Equation 7: Calculation of Maximum Bridging/Network Sleep Mode
 $P_SLEEP_AP = P_SLEEP_MAX + P_DN + P_ADD$

Where:

- PSLEEP_AP is the Maximum Sleep Mode Power Requirement, in watts, for products that were tested with additional power-consuming capabilities,
- PSLEEP_MAX is the Maximum Sleep Mode Power Requirement, in watts, as specified in Table 2,
- PDN is the sum of power allowances, in watts, as specified in Table 3, for the bridging and/or network capabilities that are connected and enabled during Sleep Mode testing, and
- PADD is the sum of power allowances, in watts, as specified in Table 4, for the additional capabilities that are enabled during Sleep Mode testing.

Table 2: Power Allowances in Sleep Mode for Bridging or Network Capabilities

Capability	Included Types	PDN (watts)
Bridging	USB 1.x	0.1
	USB 2.x	0.5
	USB 3.x, DisplayPort (non-video connection), Thunderbolt	0.7
Network	Wi-Fi	2
	Fast Ethernet	0.2
	Gigabit Ethernet	1

Table 3: Power Allowances in Sleep Mode for Additional Capabilities

Capability	Included Types	PDN (watts)
Sensor	Occupancy Sensor	0.5
Network	Flash memory-card/smart-card readers, camera interfaces, PictBridge	0.2

Off Mode Requirements

A product need not have an Off Mode to be eligible for qualification. For products that do offer Off Mode, measured Off Mode power (POFF) shall be less than or equal to the Maximum Off Mode Power Requirement (POFF_MAX) of 0.5 Watts.
